

FAHAD ZAKIR

FULL STACK WEB DEVELOPER

DEAR HIRING MANAGER,

My memories of Infosystem date back to my previous career when I traded this great companies stock, so I am well aware of them and how this is an amazing opportunity with such a big company.

I am very passionate about programming now and I am fully dedicated and possess a great drive to get better by the day. An example of my passion is travelling from Orlando, FL to Atlanta, GA to attend an intense boot camp with General Assembly. At General Assembly, we started off with the fundamentals HTML, CSS and JavaScript along with jQuery as a framework. For front-end, I possess a great eye for design while writing clean codes. We were then taught back-end technologies starting with Node.js + Express + MongoDB + mongoose intensively. A project that I built after covering React.js was using React.js for front end coupled with Node.js as a back-end for which I build a Gift-list app. I implemented these skills by building a project which used full CRUD functionality starting with a user login for a game app. I have built projects using these as back-end while using React.js for front-end deployment. Rails with PostgreSQL is what we used for SQL database and I combined that with React.js for a React on Rails app. The technologies mentioned in this position happen to be from two of my favorites, with React.js as front-end while using Node.js as back-end.

I am confident that I will be an excellent addition to this company and I would love the opportunity to discuss this opportunity with you further. If you have any questions about my background, please do not hesitate to reach out to me at fahadzakir11@gmail.com or 407-446-9070. I look forward to hearing from you!.

Sincerely,

Fahad Zakir

Candidate
